Shared Living: Kaam ke hisaab se status

Update #3 · 22 Oct 2026 · Last kaam: Kaam 17: Docker + deployment setup (PR #3)

Ab tak 17 kaam hue: 12 Ho gaya, 5 Code ho gaya (bahar ka kaam baaki), aur 10 kaam aage baaki hain.

Ho gaya = code poora aur tests mein verify. Code ho gaya = code poora aur test hua, par asli credentials ya kisi insaan (expert, lawyer, native speaker) ki zaroorat hai. Baaki = bana hi nahi.

1. Kaam ke hisaab se (ek ke baad ek)

#	Kaam	Kya kiya	Status	Proof (kaise verify hua)	Aage kya karna hai
1	**Teeno PDF samajhna**	Product Blueprint, Target Market aur Developer Brief ka short Hinglish summary diya.	Ho gaya	Summary chat mein di gayi.	Kuch nahi.
2	**Manual pilot kit**	Interview script, WhatsApp messages (hand se bhejne wale), 4-hafte ka schedule, go/stop rules aur tracker sheet.	Ho gaya	Files bani.	Aap pilot shuru karo; city ka naam bharo.
3	**Segment + city decision aur claims verify**	Recommendation: shared flat/PG working professionals, Bengaluru. PDFs ke numbers/prices/competitor web par check kiye (MEA, Splitwise, KitchenOS, WhatsApp rates).	Ho gaya	Table sources ke saath. mea.gov.in aur Meta page khule nahi, isliye secondary sources use hue.	Aap: Meta rate card, Splitwise India price, MEA original table khud dekho; faisla aapka.
4	**Database schema aur starter data**	Saare tables (households, members, kharcha, list, plan, reminders, audit...), 32 recipes, 16 substitutes, default prices.	Ho gaya	Migration chali; tests pass.	Production Postgres lena.
5	**Money engine**	Equal/custom/percent split, balances, kitty, settlement suggestions, void aur audit trail. Sab code se, AI se nahi.	Ho gaya	Tests: balances ka sum hamesha zero, retry par double entry nahi.	Kuch nahi.
6	**Meal planner, price book, protein ranking**	Budget-fit plan (cost code se), diet/allergy filter, swap, price book jo seekhta hai, protein per rupee.	Code ho gaya	Tests: budget se zyada nahi jata, impossible budget saaf bolta hai, swap sirf us meal ke items badalta hai.	Aap: recipes, protein values aur prices kisi expert se verify karwao.
7	**Shopping, tasks, health, reminders**	Merged list, pantry subtract, cooking rotation, Sunday reset, private meal log + balance feedback, food-only reminders.	Ho gaya	Tests pass.	Kuch nahi.
8	**Message parser (rules)**	Hinglish/English/Hindi/Punjabi messages ko rules se samajhna: kharcha, contribution, list, budget, plan, reminder, pantry, undo...	Ho gaya	226-message eval: jo rules ke liye flagged hain sab sahi.	Asli users ke messages se eval set badlo.
9	**AI aur voice adapters**	Claude aur OpenAI parsing (strict JSON schema), speech-to-text, silence/noise guard.	Code ho gaya	Local fake servers se tested (headers, body, retry, parsing). Asli API kabhi nahi chali.	Aap: API key lagao, npm run eval, asli voice notes se test.

#	Kaam	Kya kiya	Status	Proof (kaise verify hua)	Aage kya karna hai
10	**WhatsApp layer**	Webhook, signature check, dedupe, consent, 24h window, template fallback, outbox + retries, delivery receipts.	Code ho gaya	Mock aur fake server se tested. Asli WhatsApp number par kabhi nahi chala.	Aap: Business account + number, webhook jodo, 3 templates approve karwao.
11	**Background jobs**	Reminders bhejna, Sunday weekly recap, pantry expiry alerts.	Code ho gaya	Tests pass (window ke andar text, bahar template).	Live WhatsApp par test.
12	**REST API + login**	Dashboard API, WhatsApp ke one-time link se login, har query household se scoped.	Ho gaya	Isolation tests; ek household doosre ka data nahi dekh sakta.	Kuch nahi.
13	**Dashboard (web)**	6 screens: Home, Plan, Shopping, Money, Food log, Household. Mobile-first.	Ho gaya	Real browser (Chromium) mein chala kar dekha, koi error nahi.	Kuch nahi.
14	**GitHub repo par push**	Poora project santwayne/Household (main) mein.	Ho gaya	Push confirm hua.	Aap: repo ko Private karo.
15	**Aadha hissa poora kiya**	Schedule (shifts/classes), pasand-napasand se seekhna, pantry + expiry + cook-from-pantry, chat mein custom split, budget alert sabko, delivery receipts, privacy page, rate limits, pilot metrics (retention, correction rate), dashboard extras, saari strings 4 bhashaon mein.	Code ho gaya	56 tests pass; browser mein verify.	Hindi/Punjabi aur privacy notice ka review (native speaker, lawyer).
16	**CI (GitHub Actions)**	Har push (main) aur har PR par: Postgres 16 start, type check (server + web), 56 tests, eval, dashboard build. Root par `npm run typecheck` bhi.	Ho gaya	Wahi steps local chalaye (sab pass) aur GitHub par PR #2 ka pehla CI run success.	Aap: PR #2 merge karo. Chaho to Settings mein main par 'CI pass hona zaroori' rule lagao.
17	**Docker aur deployment setup**	Dockerfile (non-root, health check), docker-compose (app + Postgres 16), .dockerignore, DEPLOY.md (settings, HTTPS/Caddy, WhatsApp webhook, backups). CI mein naya docker job jo poora stack boot karke check karta hai.	Ho gaya	Image build hui, container healthy, non-root; signed webhook 200, galat signature 401, dashboard aur /privacy chale. GitHub CI par compose stack bhi boot hua (docker + test jobs success). Mere sandbox mein Docker Hub ne Postgres image rok di thi, isliye full compose wahin GitHub par verify hua.	Aap: PR #2 phir PR #3 merge karo. Asli hosting (server/account), monitoring aur secrets manager aapko lena hoga.

2. Galtiyan jo mili aur theek ki

Galti	Kaise theek hui
Ek hi message ki doosri item list se gir jaati thi (dedupe bahut zyada tha).	Dedupe ab message id + item + quantity dekhta hai. Test add hua.
Household delete SQL foreign-key order se fail hota tha.	Ledger foreign keys deferred kiye; delete order bhi theek kiya.
Outbox pehla reply bhejta hi nahi tha (clock compare galat).	Ab database ke time se compare hota hai. Test pass.
Planner lunch aur dinner mein ek hi dish de deta tha.	Variety ab saare slots mein dekhi jaati hai.

Galti	Kaise theek hui
Rules ne 'bread nahi chahiye' ko add samjha, aur 'Aman ne ... le aaya' ko mark-bought.	Remove rule pehle, aur lambi sentences model ko bheji jaati hain. Eval se mile.
Eval test dheela tha; 5 aur rule gaps chhupe the.	Test sakht kiya: non-flagged har message sahi parse hona chahiye. 5 gaps theek kiye.
Parallel tests ek hi database par takra rahe the.	Tests ek ke baad ek chalte hain.
Pehle STATUS mein eval '200 mein 92%' likha tha; set 226 ho gaya.	Numbers dobara naapke: 226 mein rules ne 201 handle kiye, sab sahi (precision 100%); 25 model ke liye.
Pehli PDF mein kaafi cheezein 'Aadha' thi aur matlab saaf nahi tha.	Ab teen saaf status: Ho gaya, Code ho gaya (bahar ka kaam baaki), Baaki.
Main PR bina diff ke nahi ban pa rahi thi (kaam seedha main par push hua tha).	Review-only PR #1 baseline branch ke saath banayi. Aage har kaam feature branch + PR se (jaise PR #2).

3. Aage ke kaam

Kaam	Kaun karega	Kab
WhatsApp Business account, number, templates approve	Aap	Pilot ke saath
API key lagana, npm run eval, asli voice test	Aap	Number milte hi
Recipes, protein values, prices expert review	Aap + expert	Launch se pehle
Hindi/Punjabi replies review	Native speaker	Launch se pehle
Privacy notice lawyer review, contact email	Aap + lawyer	Launch se pehle
Manual pilot, interviews, go/stop faisla	Aap	Hafta 1-4
Repo Private karna	Aap	Aaj
Hosting par asli deploy, monitoring, secrets manager	Aap (server/account chahiye)	Pilot se pehle
Postgres row-level security	Claude	Aap bolo to
Receipt OCR, pantry photos, payments, billing	Claude (pilot ke baad)	Pilot ke baad

Files ke detail: STATUS.md, PILOT_DECISION.md, README.md (repo mein). Numbers, prices aur competitor claims assumptions/secondary sources par hain.
